Let's Start!

Is this system usable?

Learning Outcome:

Interpret the technical design report, to determine the work plan during the phase of building the software, based on regulation and protocols established by the company.

Designs the graphic layout of the IT solution.

Can Do Statements:

- I can talk about the importance of usability in graphic design.
- I can describe how to develop usability when designing a system.

Ask your partner:

- How do you make sure a system is usable?
- What do you think the steps to make a system usable are?

Let's Explore!

This web page is not user-friendly at all!

Instructions: Read the text below.

Camila: Juan, according to the users' survey we implemented in the web page regarding its usability, we had better change some aspects to make it more user friendly.

Juan: I see. According to the results, this web page doesn't have all the necessary attributes to be user friendly yet. Although, our designer seems to have included everything for that purpose.

Camila: Well, it looks like we don't have a meeting tomorrow, but we have it this very afternoon! The designer doesn't know very well what usability is and the design he created was not a user-centered design.

Juan: How are we going to make sure the new design is usable?

Camila: I consider that we might want to implement a testing process; we have a usability testing session next week to make sure that users don't have any problem using the page in the near future. We ought to create a series of tasks that users need to develop without any help. While they develop those tasks, we take notes on their behavior and the time they take to complete tasks. At the end, if they don't develop those tasks in the projected time, we will analyze data and we will make the necessary arrangements in the design.

Juan: I imagine that once we've finished with all the tests, we'll have lots of changes in the design. So, is there a way to optimize time?

Camila: Well, we might want to work on usability.

Juan: How are we going to do that?

Camila: First, we need to test the previous design during the next weeks to check all the things that we don't need. Then, we need to have a field study to check the users' behaviors. We might want to create paper prototypes to test them. After that, we ought to create multiple iterations on the computer to check which one works best. Then, we implement the final design. This means that we don't have to focus on time, but also on usability in this afternoon's meeting.

Let's Practice!

Do you develop usability when designing a system as Camila does?

Instructions: Read the questions. Select the correct answers to complete each statement. Read the sentences aloud. Check your pronunciation with your instructor.

1. The survey results suggest that _____ change some aspects to make the website more user friendly.
 - a. we had better
 - b. I have better
 - c. we have better
 - d. the designer have better
2. I think that according to the survey results _____ to implement actions to make this web page user friendly.
 - a. we want
 - b. we might want we might not
 - c. we might do
3. _____ find a solution to enhance the web page user-friendliness.
 - a. We ought
 - b. We should
 - c. We might want
 - d. We ought to
4. We _____ some tasks that users develop without any assistance.
 - a. ought to create
 - b. ought create
 - c. got to create
 - d. got create
5. Juan: how are we going to do work on usability? - Camila: Well, first _____ test the previous design to check all the things that we don't need.
 - a. we'd better
 - b. we better
 - c. we would

Let's Practice!

Let's practice using some words to talk about the importance of usability in graphic design

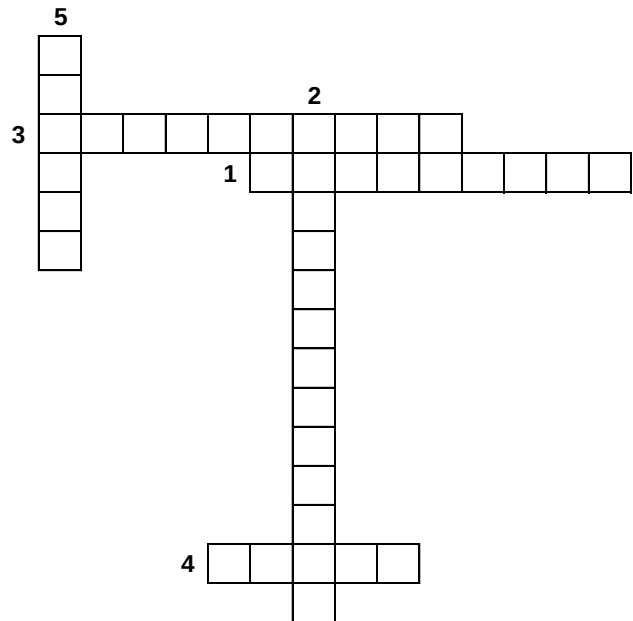

Instructions: Read the clues. Complete the crossword.

Down

2. Patrick, you might want to create a web with a _____ design.
5. Therese, you ought to make sure the new web design is _____.

Across

1. Megan, we ought to implement a _____ survey in the web page.
3. Selena, you had better include all the necessary _____ in the web to be use friendly.
4. Peter, you might want to have a field study to check the _____ in the web.

Extension Activity

Now it's your turn to implement usability in your graphic design.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Find information about how to develop usability when designing a graphic layout.
- Choose the most important information in bullet points.
- In a piece of cardboard, design a graphic layout and write the most important aspects you include to develop usability on it.
- Share the layout with the whole class.
- Give an oral presentation to explain to your partners about how you developed usability in the graphic design.

Self-Assessment

Yes

No

- I find information about how to develop usability when designing a graphic layout.
- I choose the most important information.
- I design a layout with the most important aspects to develop usability.
- I explain to my partners how to develop usability in a graphic design.

☐	☐
☐	☐
☐	☐
☐	☐

Target Words

- **survey** (noun): a series of questions that attempt to find out specific information
e.g. Juan, according to the users' survey we implemented in the web page about its usability, we had better change some aspects to make it more user friendly.
- **usable** (adjective): ready for use
e.g. How are we going to make sure that the new design is usable?
- **user-friendly** (adjective): that is easy to be used
e.g. I thought this web page had all the necessary attributes to be user friendly.
- **arrangement** (noun): to fix or organize something
e.g. At the end, if they don't develop those tasks, we will analyze data and we will make the necessary arrangements in the design.
- **optimize** (verb): to make effective something
e.g. So, is there a way to optimize time?
- **field study** (noun): a study done under certain characteristics
e.g. Then, we need to have a field study to check the users' behaviors.

Learning Points

Present Simple- Negative Form

There are many tenses that can be used to talk about actions in the future. One of such tenses is the **present simple**. You can use the present simple to talk about actions that take place in the future. These actions can or cannot take place, this is why, we are to focus on the negative form of this tense.

To talk about the future with **present simple**, you just need to device a sentence using this tense and add an adverb that points out that the action is taking place in a time beyond the present. Take a look at the structure:

Simple present

Pronoun + Verb + Complement

Example:

You need to come to the design test tomorrow morning. It's mandatory!

Now, as it was pointed out above, the actions may not need to be performed, nevertheless, they are suggested as a negative possibility in the future. Take a look at the structure:

Simple present in negative

Pronoun + Aux (do/does) + Not + Verb + Complement

Example:

You don't need to come to the design test tomorrow morning.

Examples

- *We don't have a meeting tomorrow, but we have it this very afternoon!*
- *We have a usability testing session tomorrow to make sure that users don't have any problem using the page in the near future.*

Learning Points

The Importance of Usability

Useless systems usually end up in high costs to the business; clients' satisfaction and productivity are the most affected aspects.

The most important aspect of a system usability is that clients will be able to complete their tasks effectively, which gives them a sense of satisfaction when manipulating a computer.

Some negative aspects about usability are:

People will never use a system if they find it difficult to use.

People will search elsewhere for products or information if it is not easy to do it in your web page.

People won't like to spend lots of time trying to find information.

People won't like to contact for support if they find the system inappropriate.

Remember that designing a usable system doesn't depend on the designer only, clients play an important role when designing systems too, because identifying their needs play an important role in a system's design.

Examples

- *First of all, we are going to have a usability testing session to make sure that users in the future will have no problems using the page.*
- *Well, we ought to create a series of tasks that users need to develop without any help. While they develop those tasks, we are taking notes about their behavior and time they take to complete tasks. At the end, if they don't develop those tasks in the projected time, we will analyze data and we will make the necessary arrangements in the design.*
