Let's Start!

Let's combine cool and warm colors in our design!

Learning Outcome:

Interpret the technical design report, to determine the work plan during the phase of building the software, based on regulation ad protocols established by the company.

Designs the graphic layout of the IT solution.

Can Do Statements:

- I can talk about previous experiences with design and colors.
- I can give advice about how to integrate warm and cool colors in the system design.

Ask your partner:

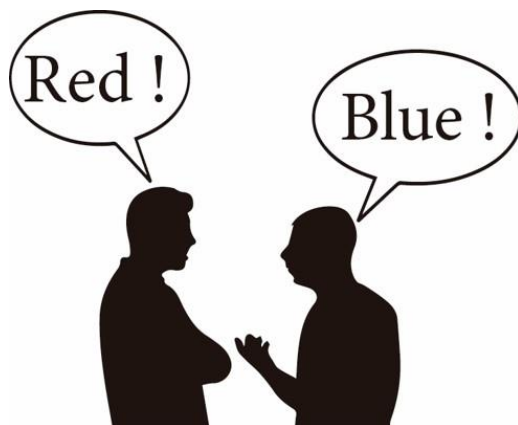

- How can we classify colors?
- Colors can symbolize different things to various cultures, what meanings do colors have in your culture?

Let's Explore!

The balance between warm and cool colors is not appropriate.

Instructions: Read the text below.

- Kelly:** Hi Victor, I really appreciate your help checking the design I have for the web page.
- Victor:** No problem Kelly, you know you can count on me. Let's check that design.
- Kelly:** Look, here I have the design I came up with.
- Victor:** Nice! You really did a good job with the font, shapes, and balance of information, but you'd better change colors.
- Kelly:** Why? I think that those colors are appropriate for the web page.
- Victor:** Well, the combination you have is not appropriate, so you might want to check how to use and combine colors. You only used cool colors, there aren't any warm colors.
- Kelly:** Warm and cool colors?
- Victor:** Yeah, warm colors are red, orange and yellow; they're passionate and energizing colors. Cool colors are green, blue and purple; they are relaxing, calming colors.
- Kelly:** Why isn't a good idea to have only cool colors?
- Victor:** When I started creating designs, I used to create designs only with cool colors but I realized that even if they are relaxing, they can lead to monotony and therefore lack of impact. So, in my latest designs, I would combine the two types of colors in order not to become predictable.
- Kelly:** How can I have a nice combination of both?
- Victor:** You might want to use some red, in that way you can give accent to the design, it can give energy to the web page. I used to put some orange to give vitality and green to give freshness to the design; users would find it friendlier.
- Kelly:** Well, I want to have a happy atmosphere for the design. What color may I use?
- Victor:** In that case, you ought to use a yellow color, in that way you are indicating a sense of happiness.

**Let's Practice!**

Victor shares his experience with design and colors.

Instructions: Read the sentences. Write the missing word(s) in the blank. Use: used to create, would combine, to apply, wouldn't dare and used to.

1. When I started creating designs, I _____ include cool colors.
2. I used _____ relaxing colors in my designs.
3. In my latest designs, I _____ two types of colors.
4. When I was younger, I _____ to use predictable colors in my designs.
5. I _____ designs with lack of impactful colors.

**Let's Practice!**

Victor advises Kelly on how to integrate warm and cool colors into design.

Instructions: Read the sentences. Circle the correct word to complete the sentence.

1. You (can wait to use / might want to use / must want to use) some red to emphasize the design.
2. You (best used / cannot use / had better use) warm colors if you want to give energy to the web page.
3. You (oughtn't to / might want to / can make) give vitality to your design using green color.
4. You (might want to / may want / might be) use green color to make the web user-friendly.
5. You (shouldn't use / could have / ought to) mix warm and cool colors in order not to become predictable.

Extension Activity

Let's work with warm and cool colors!

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more information about how to use warm and cool colors in web designs.
- Identify 10 tips and take notes.
- Create a slide show or a poster to describe your tips.
- Give an oral presentation to your partners to explain how to use colors in the system design properly.

Self-Assessment

Yes

No

- I look for more information about how to use warm and cool colors. ☐ ☐
- I identify the most important pieces of advice on how to use cool and warm colors. ☐ ☐
- I create a slide show or a poster to explain the information. ☐ ☐
- I give an oral presentation to share my findings. ☐ ☐

Target Words

- **monotony** (noun): a routine that never changes
e.g. I used to create designs only with cool colors but I realized that even if they are relaxing, they can lead to monotony and therefore lack of impact.
- **cool colors** (noun): those that generate a relaxed atmosphere
e.g. Cool colors are green, blue and purple; they are relaxing and calming colors.
- **warm colors** (noun): those that generate a passionate atmosphere
e.g. Yeah, warm colors are red, orange and yellow; they're passionate and energizing colors.
- **lack** (noun): something missing
e.g. I used to create designs only with cool colors but I realized that even if they are relaxing, they can lead to monotony and therefore lack of impact.
- **atmosphere** (noun): synonym of environment
e.g. Well, I want to have a happy atmosphere for the design.
- **freshness** (noun): that is cool
e.g. I used to put some orange to give vitality and green to give freshness to the design; users would find it friendlier.

Learning Points

Used to and Would

You can use **used to** and **would** to describe situations that happened frequently in the past.

Both **used to** and **would** are used for talking about past habits or routines.

Examples:

*I **used to work** as a software designer at that company, but I quit last year.
Every time I could, I **would grab** some coloring pencils and paper. I loved drawing.*

However, there are some aspects you need to consider when talking about situations in the past with **used to** and **would**:

1. When you use **would**, you have to mention the period of time in which the situations happened, while this is not necessary with **used to**.

Examples:

***When I was little**, I **would mix** all kind of colors in my drawings.
I **used to** mix all kind of colors in my drawings.*

2. Another difference between **used to** and **would** is that you cannot use stative verbs such as *feel*, *love*, or *be* with **would**, but it is possible to do it with **used to**.

Examples:

*When I was a college student, I **used to love** painting.
When I was a college student, I **would paint** a lot.*

This is the structure you use to make sentences with used to or would:

Subject + **used to/ would** + verb infinitive + complement.

Examples

- *When I started creating designs, I used to create designs only with cool colors but I realized that even if they are relaxing, they can lead to monotony and therefore lack of impact. So, in my latest designs I would combine the two types of colors in order not to become predictable.*
- *I used to put some orange to give vitality and green to give freshness to the design; users would find it friendlier.*

Learning Points

Warm and Cool Colors

Colors are divided into two categories warm and cool colors.

Colors play an important role when designing web pages or similar. Colors are really subjective since they produce different feelings on people. Sometimes, depending on the culture or personal preferences, colors can evoke happiness or sadness.

Warm colors are red, orange, yellow and all of their variations. These colors can produce a sense of happiness, energy or passion. These are primary colors and are not made by mixing a cool and a warm color.

Cool colors are blue, green and purple. These colors can produce a sense of relaxed or calmed atmosphere. Blue is also a primary color, and by combining it with some of those primary colors, we can obtain other colors as green or purple.

When you create a design, make sure you choose the colors carefully depending on the impression you want to create on users.

Examples

- *You might want to use some red, in that way you can give accent to the design, it can give energy to the web page. I used to put some orange to give vitality and green to give freshness to the design; users would find it friendlier.*
- *Warm colors are red, orange and yellow; they're passionate and energizing colors. Cool colors are green, blue and purple; they are relaxing and calming colors.*
