Let's Start!

Color harmony should be perfectly balanced!

Learning Outcome:

Interpret the technical design report, to determine the work plan during the phase of building the software, based on regulation and protocols established by the company.

Designs the graphic layout of the IT solution.

Can Do Statements:

- I can talk about neutral colors.
- I can describe the characteristics of tertiary colors.
- I can give information about color harmony.

Ask your partner:

- Do you consider colors choice is relevant when designing? Why? Why not?
- What colors would you use for a web page?

Let's Explore!

I want little color on this design.

Instructions: Read the text below.

- Jeff:** Hi Laura, what time does the meeting start?
- Laura:** Hey, Jeff! I think it starts around 11:00 am. Why?
- Jeff:** Well, I'm a little worried. We have a lot of work. For example, when are we working on the colors for the web page?
- Laura:** Hmm, I guess, we're working on that tomorrow morning. But don't worry, we can discuss about it while the meeting starts. Tell me, what are we going to do regarding color?
- Jeff:** Good idea! Well, I want to include little color on the web page. That's why I'm only going to use neutral colors.
- Laura:** But little color can lead to the lack of interest in the web page, few people use only neutral colors on their designs. You know, neutral colors are used as a backdrop in the designs. They serve to combine other colors, colors that are usually bright.
- Jeff:** I see. So, why don't we combine neutral and tertiary colors?
- Laura:** Tertiary colors?
- Jeff:** Yeah, colors that are formed by mixing warm and cool colors. You know, that's why the colors are given a two word name as red-orange, blue-green, red-purple, etc.
- Laura:** Well, it will be a different design; few people have tried that combination of colors. Furthermore, it will contrast with color harmony.
- Jeff:** Color harmony?
- Laura:** Color harmony is the appropriate balance of colors. It can evoke either a nice or terrible experience to the users.
- Jeff:** What will be a perfect harmony?
- Laura:** A perfect harmony will be the appropriate balance of analogous, complementary, and nature schema colors. Regarding analogous colors, they are side by side in a color wheel. Complementary colors are opposite colors like red and green. And, nature schema colors are basically yellow, red, and green.
- Jeff:** OK, so I think we are going to need to work on the combination of colors before we work on the draft. Anyway, I will like to have less color than on previous designs. You know, I want it to be different.
- Laura:** OK, I see your point. I'm sure we're doing a great job tomorrow. What time do you arrive at the office tomorrow?
- Jeff:** I arrive around 8:00 am. As soon as I arrive I'm going to your office.

Let's Practice!

Laura and Jeff talk about neutral colors.

Instructions: Read the text. Select all the correct answers.

Laura: What are we going to do regarding color?

Jeff: I want to include little color on this web page. That's why I'm only going to use neutral colors.

Laura: But little color can lead to the lack of interest in the web page, few people use neutral colors only on their designs. Few professions refer to neutral colors as earth tones.

Jeff: I like to use neutral colors. These colors have a flexibility and visual balance that works perfectly in my design.

Laura: You know, neutral colors are used as a backdrop in the designs. They serve to combine other colors, colors that are usually bright.

1. Which of the following sentences are true?
 - a. ☐ Little color can lead to the lack of interest in the web page.
 - b. ☐ Few people use only neutral colors on their designs.
 - c. ☐ Few professions refer to neutral colors as earth ones.
 - d. ☐ Few people can combine colors since it's a difficult work.
 - e. ☐ Little bright color is used as a backdrop in the designs.
 - f. ☐ Few people use only bright colors on their designs.
 - g. ☐ Few professions refer to bright colors as earth ones.

Let's Practice!

Jeff describes the characteristics of tertiary colors.

Instructions: Circle the correct words to complete the sentence.

1. Laura, (few / a few / little) people know that tertiary colors are formed by mixing warm and cool colors.
2. (Less / Few / Little) professionals realize that tertiary colors are given a two word names red-orange, blue-green, blue-violet, and red-violet.
3. In the past, (few / little / less) people used tertiary colors properly spaced around the color wheel.
4. (A little / Little / A few) attention was paid to the use of tertiary colors to have a diverse design.
5. Recently, (less / a few of / few) people have tried tertiary color combination. In fact, it contrasts with color harmony.

Extension Activity

Color Theory Applied to Web Design

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more information about color theory applied to web design.
- Summarize all the information you found.
- Prepare a presentation explaining color theory and the most common colors used in web design.
- Use the grammar and vocabulary you studied in this lesson.
- Make your presentation in front of your classmates and teacher.
- Answer the questions your classmates and teacher may have.

Self-Assessment

Yes

No

- I find information about color theory applied to web design.
- I make notes of the information I found.
- I organize a presentation to explain color theory and the typical colors used in web design.
- I use the grammar and vocabulary I learned.
- I make my presentation in front of the class.
- I answer my classmates and teacher's questions.

☐	☐

Target Words

- **backdrop** (noun): the background
e.g. You know, neutral colors are used as a backdrop in the designs.
- **tertiary** (adjective): that is in the third order or rank
e.g. So, why don't we combine neutral and tertiary colors?
- **analogous** (adjective): that have similar characteristics
e.g. Regarding analogous colors, they are side by side in a color wheel.

- **schema** (noun): a diagram
e.g. And, nature schema colors are basically yellow, red, and green.

- **draft** (noun): a sketch or design that may be fixed
e.g. Ok, so I think we are going to need to work on the combination of colors before we work on the draft.

Learning Points

Quantifiers, Less, Little, Few

You can use **less**, **little**, and **few** to talk about small quantities of something either countable or uncountable.

To talk about small quantities for uncountable nouns you use **little**.

Structure:

Little + noun + complement

Example:

Little color can lead to the lack of interest in the design.

You can use **Less** as the comparative form of little.

Structure:

Statement + **less** + noun + than + statement

Example:

I have **less** time than in the previous design to finish.

To talk about small quantities for countable nouns you use **few**.

Structure:

Few + noun + complement

Example:

Few colors should be implemented in this design.

Examples

- I want to include little color on this web page.
- But little color can lead to the lack of interest in the web page, few people use neutral colors only on their designs.
- Anyway, I will like to have less color than on previous designs.

Learning Points

Basic Color Theory

There are different color theories which are difficult to explain, yet there is one that involves all of the simple details and characteristics for color theory.

Basic color theory includes all of the aspects that are coherent and usable. These are color harmony and the color wheel.

Color harmony refers to the appropriate balance that should be presented in any design regarding colors. It must give a nice visual experience for the viewers.

The **color wheel** refers to a color circle which core colors are red, blue, and yellow. Sir Isaac Newtown pioneered this color wheel in 1666. Basically, primary, secondary and tertiary colors appeared in sequence.

The main idea for color theory is that of creating a logical structure for colors.

Examples

- *Well, it will be a different design; few people have tried that combination of colors, yet it will contrast with color harmony.*
- *A perfect harmony will be the appropriate balance of analogous colors; they are side by side in a color wheel. Complementary colors; they are opposite colors like red and green. Nature scheme colors; they basically are yellow, red and green.*
