Let's Start!

Let's create a web page!

Learning Outcome:

Interpret the technical design report, to determine the work plan during the phase of building the software, based on regulation and protocols established by the company.
Designs the graphic layout of the IT solution.

Can Do Statements:

- I can list the elements to include in any graphic design.
- I can explain each element of a graphic design.

Ask your partner:

- What elements are taken into consideration when creating a web page?
- What are the most important elements to call the visitor's attention?

Let's Explore!

The Most Basic Elements in Designing Web Pages

Instructions: Read the text below.

- Andres:** What are we going to have to take into account for the new web page design?
- Laura:** First of all, we have got to be really inspired, so we can create the best design for the proposal.
- Andres:** Remember that creating an amazing design doesn't depend on inspirational mottos only. We need to apply harmonically the best elements for design accordingly.
- Laura:** What are those elements that you refer to?
- Andres:** We have: line, color, shapes, space, typography, and size. Well very important, we need to consider people. People's opinions are essential.
- Laura:** Wow! There are a lot of elements that we have got to take into consideration. I know the line is the worthiest element because it helps to divide spaces or separate content. Color seems to be the easiest element of all. However, it is really important and we, as sketchers, should take a minute to think about its impact on the design. Shapes are the greatest way to add interest to your design. It has got to do with any geometric figure and the relationship among these three characteristics is really important, since color and lines define boundaries and interaction of these shapes. I don't remember what space has got to do with.
- Andres:** Well, space deals with all of the blank spaces that are left on the web page. The easiest way to solve this predicament is to use blank space to include shapes as in any other part of the page.
- Laura:** Okay, what about typography and size?
- Andres:** Typography is the hardest tool to define the style of the words. It shows how serious the web page is, so the font, color, and shapes that we use must be appropriate. Size is the trickiest element to be taken into account when designing a web page. It plays with the symmetry and asymmetry of the images in relations with the words and other items on the screen. In summary, the best way to get the perfect design proposal is to mix all of the elements up, looking to ask people what they think and feel about our work, because we are basically working for other people for our beloved people.
- Laura:** We are going to think and organize all elements before we start our design, and contacting as many people we can in order to have proper feedback from our work.

Let's Practice!

Let's go over* some elements to include in graphic design.

*"Go over" means to revise.

Instructions: Find the missing words for each sentence.

1. L_n_s are the simplest element of design to divide spaces.
2. Co_o_ is one of the easiest design elements to use for the user and the designer to create a background.
3. S_a_es are the greatest way to add interest.
4. S_a_eis one of the hardest aspects that help to create shapes and overall images.
5. Ty_og_ap_y is the hardest tool to define the style of the words.

Let's Practice!

These are important elements to include in graphic design.

Instructions: Read the statement. Select all the correct answers.

1. Which of these sentences are true?
 - a. ___Lines are the worthiest element to divide space and draw the eye to a specific location.
 - b. ___Color is the best design element to be applied as a background, or in shapes.
 - c. ___Textures seem to be the worst design element to create a three-dimensional appearance.
 - d. ___Space is the simplest way to create shapes or any other element.
 - e. ___Typography is the newest design element to select the color of the background.

Extension Activity

Let's create the best design for a new web page.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Find information about the elements of graphic design.
- Choose the most important elements.
- In a poster, draw the design for a new web page taken into account the elements of graphic design.
- Give an oral presentation to your partners to show and explain the design you decided to create.

Self-Assessment

Yes

No

- I find information about the elements of graphic design.
- I select the most important elements of graphic design.
- I draw the design of a new web page in a poster.
- I explain to my partners the elements chosen for the design of the new web page.

☐ ☐
☐ ☐

Target Words

- **typography** (noun) all related to typing processes and font
e.g. Well, typography has got to show how serious the web page is, so the font, color and shapes that we use must be appropriate.
- **shape** (noun) geometric figures and forms
e.g. Shapes have got to do with any geometric figure and the relationship among these three characteristics is really important, since color and lines define boundaries and interaction of those shapes.
- **sketcher** (noun) synonym of designer
e.g. However, it is really important and we, as sketchers, should take a minute to think about its impact on the design.

- **font** (noun) style and size of letter in a document
e.g. Well, typography has got to show how serious the web page is, so the font, color and shapes that we use must be appropriate.
- **proposal** (noun) a plan or recommendation
e.g. First of all, we have got to be really inspired, so we can create the best design for the proposal.
- **predicament** (noun) synonym of problem
e.g. The easiest way to solve this predicament is to use blank space to include shapes as in any other part of the page.

Learning Points

Superlatives: Short Adjectives

Superlatives are used to give the maximum noun's description.

To create a statement using a **superlative**, you need to take into account that we use **adjectives**. These **adjectives** need to be modified according to the number of syllable it has.

For **short adjectives** or one syllable adjectives you need to follow this structure:

The + Adjective (est)

Example:

Color seems to be **the easiest** element of all.

Changing shapes is **the fastest** process.

Look at the following chart to know more short adjectives:

Adjective	Superlative
Slow	The slowest
New	The newest
Long	The longest
Small	The smallest
Nice	The nicest
Good	The best
Bad	The worst

Remember that the adjectives *good* and *bad* are irregular adjectives, so their superlatives don't have the **-est** ending as the other adjectives.

Examples

- *First of all, we have got to be really focused, so we can create the best design for the proposal.*
- *The easiest way to solve this predicament is to use blank space to include shapes as in any other part of the page.*

Learning Points

Graphic Design Basic Elements

Although designs are different from one to other, they follow the same basic principles.

Any designer must know that besides inspiration there are more characteristic when creating design. There are some important basic elements that need to be consider in order to create design.

The most basic and important elements include: line, shape, color, texture, space, typography, scale, emphasis, balance and harmony.

Line has to do with every single two points connected, line is used to divide spaces or separate contents. Shape has to do with every single geometric figure included in the design. Color shows different emotions to the visitors or viewers.

Texture is related to the 2D or 3D dimensional surfaces used by designers. Space must be really well utilized since blank spaces must not appear at any segment of the design. Typography and scale are linked together; they have to do with size and font used for texts. Emphasis is how the designer creates a balance between the information that is shown in the surface. Harmony is the final product; it has to do with how all of the previous elements mentioned before are put together.

Example

- *Wow! There are a lot elements that we have got to take into consideration. I know lines help to divide spaces or separate content. Color seems to be the easiest element of all. However, it is really important and we, as sketchers, should take a minute to think about its impact on the design. Shapes have got to do with any geometric figure and the relationship lines define boundaries among these three characteristics is really important, since color and interaction of those shapes. I don't remember what space has got to do with.*
